Let's rewind!

These days everyone knows what technology is, though it wasn't always the same. It's been changing more over the years. In the past people only had basic cars, TV and telephone. And some people didn't have even those things, but now? We have robots, AI, electric cars, big TVs, smart phones and a lot more than all that. And if we think about it, we couldn't live like people used to 50 years ago, and they couldn't live like what we do today.

On one hand, thirty to fifty years ago, everything was so different, in a good, but also in a less convenient way. So, people were more social, kids were playing outside more, everyone was themselves, and of course, people knew how to have more fun without all the technology we have now. And sure, it was also harder for them. They couldn't just ask AI a question and get a response in a few seconds, same thing for texting. They would write a letter and wait days to get one letter back. I couldn't wait that long for a response. Not to mention, they had to spend money on music albums and CDs. Nowadays, we just make a bunch of playlists. And for the news and information, they would read newspapers and wait for the news on the TV. But with all that, everything still seemed more alive then.

On the other hand, here we are, having different lives from that. Like there were good and bad ways of not having technology, there are also good and bad ways of having it. We can learn and do anything in a simple way, or we don't have to wait for a specific time of the day to watch a tv show or cartoon, we just watch it on Netflix or any other site. There are apps for many different things, for example learning a new language, math problems, and some games for learning. We can also text people from all over the world and still get fast responses which can sound fun. And of course, I can't forget about the most popular and important things like social media and AI. From there we can learn, have fun, but an important part is, be in danger. We can't trust AI and social media that much. Both can spread misinformation and lies; it wouldn't be smart to reveal anything from our private life because we don't know how it could be used. And because of all that we shouldn't let little kids use it. They are losing their real happy childhood with new technology. Playing as a kid is the best part of life, which means not being on the phone or a tablet. Especially not social media because children are still unaware of the danger or brain rot.

AI and robots can easily replace people at work, like in factories. It's only good if robots replace people with hard and tiring jobs, but with AI? We still can't know where it can lead us from now, they can explain something better than people can, write to us about stuff for school or jobs, create pictures, videos and even songs. You can only get something right from it if you know how to use it.

At the end of the day, we can't live without all these technologies because it made everything simpler for us. My thoughts are that we should bring that old social life, being yourself, having fun, and having an actual good childhood back from the past, while having this smart technology. And one more thing I want to bring back is when celebrities were famous for their great talent and not social media.
